Create a new AWS account

Account Owner

## Root user

When you first create an AWS account, you begin with one sign-in identity that has complete access to all AWS services and resources in the account. This identity is called the AWS account *root user* and is accessed by signing in with the email address and password that you used to create the account.

***Important:*** We strongly recommend that you don't use the root user for your everyday tasks. Safeguard your root user credentials and use them to perform the tasks that only the root user can perform.

## IAM user

An ***IAM user*** is an identity within your AWS account that has specific permissions for a single person or application.
